Receipt Amount API

Roswalt My Home — Client Payments / Receipts

Reference for the existing, already-working Salesforce endpoint that returns a booking's payment receipts, including the receipt amount. Source: lib/providers/booking_provider.dart, consumed by lib/screens/client/payments_screen.dart.

1. Endpoint

```
POST {SFDC_BASE_URL}/services/apexrest/bookingReceipts/
```

A Salesforce Apex REST endpoint on the same org used by the rest of the client/booking flows.

2. Authentication

OAuth2 password grant against Salesforce first:

```
POST https://login.salesforce.com/services/oauth2/token
Content-Type: application/x-www-form-urlencoded

grant_type=password
client_id=<_demandsClientId>
client_secret=<_demandsClientSecret>
username=<_demandsUsername>
password=<_demandsPassword>
```

The returned access_token is then used on the actual call:

```
Authorization: Bearer <access_token>
Content-Type: application/json
```

3. Request Body

```
{ "BookingName": "<bookingId>" }
```

4. Response Shape

The response can arrive either as a raw JSON array, or wrapped in an object (`{"Receipts": [...]}` or `{"receipts": [...]}`) - the app handles both.

5. Field Mapping (App Field ← Salesforce Field)

App field	Salesforce source field(s)
receiptNumber	ReceiptNumber, or Name
totalAmount	TotalAmount — THE RECEIPT AMOUNT
projectName	ProjectName

cgst	CGST__c, or CGST
sgst	SGST__c, or SGST
receiptStatus / paymentStatus	PaymentStatus
receiptSource	ReceiptSource
receiptType	ReceiptType
transactionId	TransactionID
receiptDate	ReceiptDate
paymentMethod	PaymentMethod
milestoneName	Name

The receipt amount itself is the `TotalAmount` field returned per receipt record (mapped to the app's `totalAmount` key).

6. Where It's Used

Called via `BookingProvider.fetchReceipts(bookingName)` (booking_provider.dart lines 428-464), consumed by the Client role's Payments screen (lib/screens/client/payments_screen.dart) to list a booking's payment history. Also reused in bulk via `fetchAllBookingsData()` (lines 467-482) when generating a full ledger PDF across all of a client's bookings, alongside the parallel demands (amount-due) endpoint.

7. Status

Unlike the Channel Partner invoice endpoint, this is a real, already-functioning endpoint on the existing Salesforce org — no backend work is pending here.
